Risk Levels	Little to No	ne N	linor	Moderate	Majo	r Extreme		Extreme

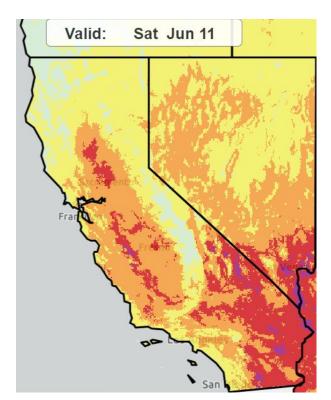

- The hottest temperatures of the week will be seen through Saturday for many areas of the state,
 particularly for those locations just inland away from the water
 - Daytime high temperatures of around 100 to 105 are expected across much of the Central Valley, while many southeast desert locations see highs of 105 to 115 degrees. High to very high heat risk impacts are expected, with record-setting high temperatures also likely in some areas.
 - A cooling trend is expected statewide for early in the week; warmer temperatures will return for
 Wednesday and Thursday, but only moderate heat risk impacts are currently expected
- Similar to many recent days, afternoon winds will remain breezy across many mountain and foothill locations today, bringing locally elevated fire weather conditions. Stronger winds are expected to develop across more of the state this weekend into early next week, with Red Flag conditions possible Sunday across southeastern California
- Mainly dry weather will persist for much of the state through the weekend and first half of next week, with the exception of far northern California where a few rounds of showers and occasional thunderstorms are expected through Sunday night
 - Rainfall amounts will be mainly light but could be locally heavier in and around thunderstorms
 - No widespread significant runoff concerns are expected at this time

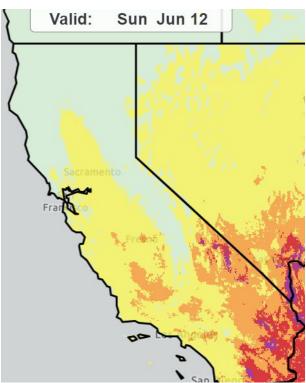

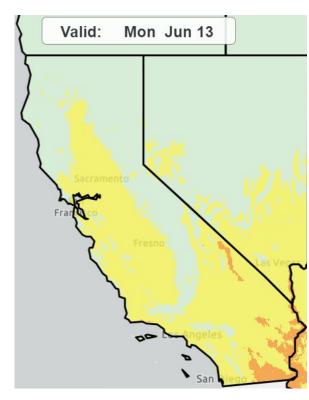

Saturday Sunday Monday

Note: Forecast precipitation amounts are an average for any particular location. Thunderstorms may produce locally higher rainfall amounts.

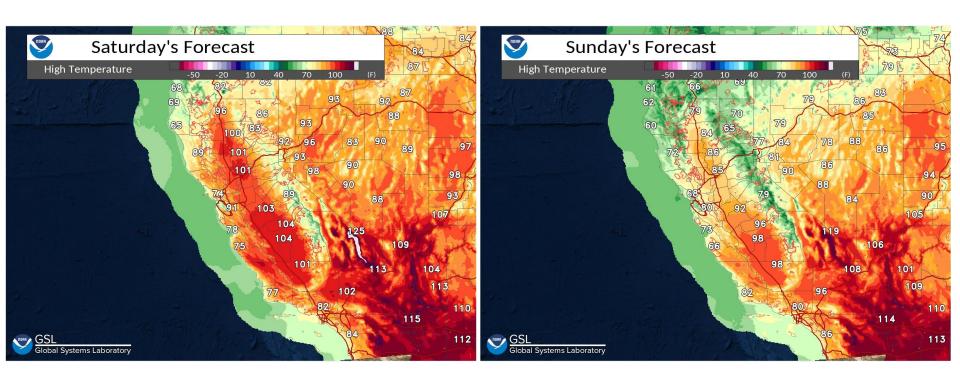

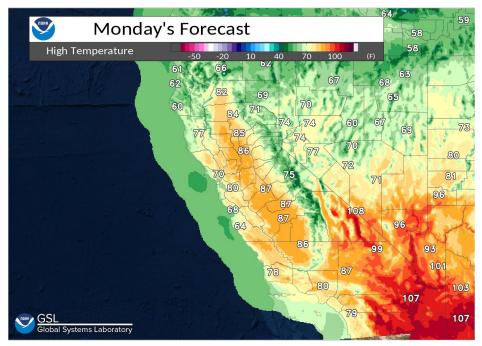

Green	Level 0	No Elevated Risk
Yellow	Level 1	Low Risk for those extremely sensitive to heat, especially those without effective cooling and/or adequate hydration
Orange	Level 2	Moderate Risk for those who are sensitive to heat, especially those without effective cooling and/or adequate hydration

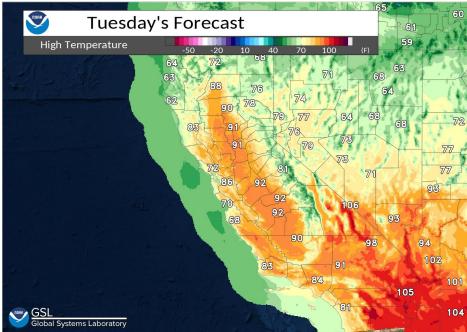

Red	Level 3	High Risk for much of the population, especially those who are heat sensitive and those without effective cooling and/or adequate hydration
Magenta	Level 4	Very High Risk for the entire population due to long duration heat, with little to no relief overnight

Low Temperature Forecast

Weather Outlook (6-14 Days)

Regional Operations Center
Western Region
Saturday, June 11

6-10 Day Outlook (June 16 - June 20)

Temperatures

 Above normal temperatures are favored to continue across far southern California, with below normal temperatures favored across the northern two-thirds of the state

Precipitation

 Near normal precipitation is favored for the majority of the state, with above normal precipitation slightly favored for far northern and far southern California

8-14 Day Outlook (June 18 – June 24)

Temperatures

 Below normal temperatures are favored for much of central and northern California, with above normal temperatures slightly favored over far southern portions of the state

Precipitation

 Near normal precipitation is favored for most locations, except for areas near the Oregon and Arizona borders where above normal precipitation is slightly favored

Risk Assessment Matrix

Impact Level Definition

- 1. Impactful weather is not expected.
- 2. Potential threat to lives and property if no/incorrect actions are taken.
 - a. Localized impacts on commerce possible.
 - b. Includes events that occur frequently.
- 3. Potential threat to lives and property if no/incorrect actions are taken.
 - a. Impacts on commerce possible.
 - Includes events that occur a few times per year.
- 4. Actions likely needed to save lives and/or property.
 - a. Significant impacts to commerce possible.
 - b. Includes events that occur infrequently.
- Actions required to save lives and/or property.
 - a. Significant and extended impacts to commerce.
 - b. Includes exceptionally rare events.
